

January 25, 2011 – Markham, Ontario

## Electronic Technologist

*A world leader in ATE for cables and wire harnesses requires a self-motivated and enthusiastic individual to complement our production team.*

### About CableTest Systems Inc.

CableTest Systems Inc. provides total cable testing solutions to a wide array of industries including aerospace, computers, medical, telecommunications, transportation and the military. Customers rely on CableTest's low and high voltage interconnect equipment to test their cables, wiring harnesses, power cords, and backplanes with speed, accuracy and reliability. You can learn more about CableTest Systems Inc. at [www.CableTest.com](http://www.CableTest.com).

### Major Responsibilities

- Diagnose products to the component level and carry out corrective action.
- Provide technical assistance and support in the production of the product.
- Assist with the design and developing new methods, products, and systems.

### Minimum Qualifications

- Good knowledge of electronic analog, digital, measurement and control circuitry.
- Familiar with AC, DC and high voltage power supply circuits.
- Ability to understand schematics, trouble-shoot circuits to the component level and analyze micro-controller based test automation modules.
- Willingness to learn and be involved in our product quality control program.
- Capable of working with minimum supervision.
- Excellent written and verbal communication skills including fluency in English.
- Possess the ability to work well within a team.

### Desired Qualifications

- Experienced user of test equipment for production test, calibration and quality control tasks.
